1) Nothing is actually manufactured at the site. It is an old Pennzoil "tank farm" that has been repurposed by Freedom Industries Inc to store 4 methylcyclohexane, which is used to wash coal at coal preparation plants. This is not a mine discharge - its a storage tank leak, sited about 1\2 mile downstream from WV American Water Co's intake.

2) EPA has no official advisory statement at this time on the toxicity of the material.

3) I will explore possibility of a Monday call and notify you ASAP.

This is interesting thank you. The committee still has some questions:

1)What was the purpose of the plant? What were they manufacturing?

2) Does R3 have an official EPA position on the FEMA q (below)?

3) Will R3 be able to do a call on Monday to brief the committee staff?

Many thanks,

Raquel Snyder

West Virginia American Water Co is collecting water samples. Labs at local DuPont plant and the WVDHHR Bureau for Public Health are running the samples, taken from a variety of locations. (DuPont worked last night to develop and share a method to detect this material in water.)

WVDEP has the lead at the moment. FEMA is assisting (providing and siting potable water buffalos in various areas, coordinating with the state Office of Emergency Services and local volunteer fire departments. EPA is on the ground at the site to document and provide technical assistance - EPA has not been formally requested to engage by the state. DEP has asked EPA to set up air monitoring (PID) photo ionization detection.

A threat was registered against the site facility by phone around 12:30 today and Kanawha County deputies and FBI responded on site and swept the area.

A vac truck is being brought to the facility by barge to collect material contained around the spill site before rains arrive later tonight.

At this point the water company appears to have the lead on public communications with periodic press conferences.

Subject: RE: T&I follow up Questions

They are most interested in what was going on at the facility. I told them there is no history of enforcement actions and that one of the facilities has an NPDES permit while the other is a RCRA small quantity generator. I also mentioned it was the old Pennzoil plant and the chem was used for coal washing.

Does R3 have any more info or what they were manufacturing or producing?

The staff were also on a call with the Ranking Member and FEMA regarding the situation and

Ex. 5 - Deliberative

They'd would like to know if EPA agrees with that statement.

Also, let me know about a call for Monday with the committee staff. There may be many more requests for briefings. The senate is now involved in inquiries.

Many thanks,

Ha! I love it.

Can ask your folks to provide an official response or advise that we don't contradict other agencies, etc.? I'm not sure how to handle that one.

Many thanks,
